 Denver, Colorado & Saline, Michigan; United States

Education

Non-degree seeking - University of Colorado Anschutz Medical Campus- Aurora, CO	Fall 2023

- BIOS 7747: Machine Learning for Biomedical Applications, graduate course offered by the University of Colorado School of Public Health

B.Sc. in Computational Neuroscience - Michigan State University - East Lansing, MI	2020-2022

- GPA: 3.89/4.0
- Graduated 'With Honor' (top 7-20%)
- Semester awards: Dean's List

Math and Science Transfer Program - Washtenaw Community College - Ann Arbor, MI	2018-2020

- GPA: 3.52/4.0
- Semester awards: Honor Roll
- Transferred

Publications

MolEvolvR: A web-app for characterizing proteins using molecular evolution and phylogeny
Jacob D Krol[*], Joseph T Burke[*], Samuel Z Chen[*], Lo M Sosinski[*], Faisal S Alquaddoomi, Evan P Brenner, Ethan P Wolfe, Vincent P Rubinetti, Shaddai Amolitos, Kellen M Reason, John B Johnston, Janani Ravi
bioRxiv 2022.02.18.461833; doi: `https://doi.org/10.1101/2022.02.18.461833` ([*] indicates co-primary author)

Jacob D Krol, Ethan P Wolfe, Evan P Brenner, Keenan Manpearl, Vignesh Sridhar, Joe Burke, Jill Bilodeoux, Janani Ravi Accurately predicting AR in ESKAPE pathogens using ML (*In preparation*).

Presentations & posters

Great Lakes Bioinformatics Conference - MolEvolvR a web-app for protein characterization- McGill University, Montreal, CA	2023

- Discussed the development and future directions of a web-app I develop: http://jravilab.org/molevolvr

Great Lakes Bioinformatics Conference - How and when to build a web-app or R package?- McGill Universtiy, Montreal, CA	2023

- Hosted a 4 hour in-person workshop on how to build an R package using automation: devtools and usethis. A github repo for a sample R package I wrote is located at http://www.github.com/jravilab/iprscanr.

Bioconductor - MolevolvR a web-app for protein characterization - Boston University, Boston, MA	2023

- Presented on MolEvolvR application methodology for the Cancer and Evolution talks section

Grants and Funding

- Applied for Fall 2023 NSF GRFP (in-review)
- Contributed to minor revisions U01 grant submission (awarded)
- Contributed revision and figures to R01 grant submission (in-review)

Professional Experience

Information Sciences Professional (PRA) - Dept. of Biomedical Informatics, Center for Health Artificial Intelligence, University of Colorado Anschutz School of Medicine - JRaviLab - Aurora, CO   2022-2023

- First author on preprint publication for a protein analysis app (http://jravilab.org/molevolvr/?r=&p=home); front and backend web development [R + Shiny + Slurm + batch scripts]

- Developed a prokaryotic pangenomics machine learning (ML) pipeline for predicting anbitiotic resistance in bacterial strains (publication/pre-print coming soon)

- Implemented various ML classifiers including Random Forest, Support Vector Machine, Logistic Regression, and XGBoost

- Used common classifier performance metrics and plots such as AUROC, AUPRC, and balanced accuracy

- Analyzing feature across classes using fisher's test, evaluating hamming distance metrics, and unsupervised ML clustering

- Hosted multiple workshops on Bash, Git, R package development, and ssh-workflow basics

- Creating custom container environments (Docker & Singularity) for running projects on various machines

- Software used frequently: Github/Git, slurm, PBS torque, R (tidyverse, Bioconductor suite, httr, Shiny, & much more), Python (Pandas, Numpy, Scikit-learn, Matplotlib, BioPython, requests, & more), Bash, Docker, notebook environments (Rmd, Jupyter, & Quarto), various CLI tools, & many more

- Assisted in writing and generating figures for grant proposals and publications

- Work closely with the Department of Biomedical Informatics software engineering team on web development, server on-boarding, installations, environment setup, and more

- Assisted in software troubleshooting/guidance for other projects in lab

Student Research Assistant II - Computational Mathematics Science and Engineering program, Michigan State University - Krishnan Lab & Malmstrom Lab - East Lansing, MI
<div align="right">2022</div>

- Learned, presented on, and implemented statistical methods on viral protein datasets: fisher test, logistic regression, & principal component analysis

- Trained machine learning classifiers to predict plant virus' host types; also, trained models to predict plant virus taxonomy.

- Featurization of protein sequences and data wrangling with Pandas, Biopython, NumPy, and R (Tidyverse + Bioconductor) packages for biological feature extraction

- Further preparing data with one-hot-encoding and z-score normalization

- Analyzing and visualizing model performance with Matplotlib/Seaborn & Scikit-learn performance metrics

Professional Summary

- Developed bioinformatics tools and worked on microbial/viral omics projects using R, Python, and Bash/shell with basic familiarity of other common languages like Javascript, C, Java, and Perl
- Use large, public databases (e.g., BVBRC, NCBI, InterPro) with applied machine learning to study the relationship between viral/bacterial genotypes and phenotypes
- Extensive remote server work on our lab webserver, CU Alpine HPC cluster, and MSU's Compute HPC
- Attended international conferences for workshops and presentations, hosted department programming workshops
- Developed a protein analysis web-app MolEvolvR
- Practiced code reproducability with containers, virtual environments, and version control
- Practiced code readability with linters, documentation, and code reviews
- Exceptional knowledge of POSIX command-line tools and commonly assist in system administrator tasks on my lab's webserver
- Applied various statistical methods to analyze omics data such as supervised classification, unsupervised clustering, fisher's test, principle component analysis, ROSE oversampling, etc.
- Regularly implement and self-study statistical methods; I also like to hosts journal clubs on papers that cover essential, relevant statistical topics like over/under-sampling methods, dimensionality reduction techniques, and classification models/performance-evaluation.
- Assist in various sub-tasks throughout the lab such as one-on-one mentorship with undergraduates and graduate students

Keywords

Python, R, machine learning (ML), High Performance Computing (HPC), Bash, Vi/Vim/Nvim, VsCode, RStudio, SLURM, PBS Torque, Linux, ssh, genomics, proteomics, domains, antibiotic resistance/drugs, pangenomics, Git/Github, Docker, Singularity, web-development, Shiny, tidyverse, tidymodels, Pandas, NumPy, Scikit-learn, Matplotlib, APIs, BVBRC, bacteria, host, pathogens, phylogeny, evolution, statistical methods, principal component analysis (PCA), single value decomposition (SVD), logistic regression (LR), random forest (RF), XGboost, support vector machine (SVM), AUROC, AUPRC, fisher test, virtual environments, research, bioinformatics, computational biology, LaTeX
